Artemeter 20mg/ml

This presentation should be added in the EML for children and MSF is already using it.

We have already shared our concerns regarding the quality of some essential medicine sources and would like to reiterate it. Attention should be paid to the quality of the sources available on the worldwide market for some products. We would like to recommend that these products and dosage forms are assessed by the WHO prequalification team and therefore listed in the Expression of Interest to allow manufacturers to submit their dossier for evaluation.
