Published by WHO, also on behalf of UNICEF, the UNAIDS Secretariat, and Médecins Sans Frontières.

WHO, UNICEF, the UNAIDS Secretariat, and Médecins Sans Frontières have made every effort to ensure the accuracy of price, supplier, and other information presented in this report. Reader's attention is drawn to the introduction, which describes the specific sources and limitations of information provided in this report.

Reader's attention is also drawn to the importance of quality assurance for pharmaceutical products. Licensing authorities in the respective countries of manufacture are expected to be responsible for the review and approval of the detailed composition and formulation when authorizing a pharmaceutical product to be marketed, including the specifications of its ingredients, as submitted by the manufacturer of the dosage form, and to oversee compliance with Good Manufacturing Practice requirements as recommended by WHO.

The data and information contained herein are being provided as is and WHO, UNICEF, the UNAIDS Secretariat, and Médecins Sans Frontières make no representations or warranties, either expressed or implied, as to their accuracy, completeness or fitness for a particular purpose. Neither WHO, UNICEF, the UNAIDS Secretariat, nor Médecins Sans Frontières accepts any responsibility or liability with regard to the reliance on, or use of, such data and information.

The mention of specific companies or of certain manufacturers' products does not imply that they are endorsed or recommended by WHO, UNICEF, the UNAIDS Secretariat or Médecins Sans Frontières in preference to others of a similar nature that are not mentioned. Errors or omissions excepted, the names of proprietary products are distinguished by initial capital letters.

The designations employed and the presentation of the material in this report, including tables and maps, do not imply the expression of any opinion whatsoever on the part of WHO, UNICEF, the UNAIDS Secretariat and Médecins Sans Frontières concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted lines on maps represent approximate border lines for which there may not yet be full agreement.

Glossary

AIDS¹ Acquired Immune Deficiency Syndrome – the late stage of HIV disease. AIDS involves the loss of function of the immune system as CD4 cells are infected and destroyed, allowing the body to succumb to opportunistic infections (e.g., *Pneumocystis carinii pneumonia*, toxoplasmosis) that are generally not pathogenic in people with intact immune systems.

COF Consejo General de Colegios Oficiales de Farmacéuticos – Spanish organization of Pharmaceutical Colleges, which represents all colleges in the national and international forum, develops norms, rules, and professional policy, and acts as the interlocutor with Spanish Ministries.

Diagnostics Laboratory tests used in the diagnosis of HIV infection.

ELISA Enzyme-linked immunosorbent assay – first HIV antibody test which requires a machine to measure color change in test wells.

Endemic¹ The continuous presence of a disease in a geographic location, community or population.

Epidemic¹ An outbreak of a disease within a population. See also pandemic.

EXW² Ex-works – (... named place) the seller's only responsibility is to make the goods available at the seller's premises, i.e., the works or factory. The seller is not responsible for loading the goods on the vehicle provided by the buyer unless otherwise agreed. The buyer bears the full costs and risk involved in bringing the goods from there to the desired destination. Ex works represents the minimum obligation of the seller.

FCA (nearest port)² Free Carrier – (... named place) This term has been designed to meet the requirements of multimodal transport, such as container or roll-on, roll-off traffic by trailers and ferries. It is based on the same name principle as F.O.B. (free on board), except the seller fulfills its obligations when the goods are delivered to the custody of the carrier at the named place. If no precise place can be named at the time of the contract of sale, the parties should refer to the place where the carrier should take the goods into its charge. The risk of loss or damage to the goods is transferred from seller.

FOB² Free-on-board – (... named port of shipment) Under "F.O.B." the goods are placed on board the ship by the seller at a port of shipment named in the sales agreement. The risk of loss of or damage to the goods is transferred to the buyer when the goods pass the ship's rail (i.e., off the dock and placed on the ship). The seller pays the cost of loading the goods.

Generic medicine³ The term "generic product" has somewhat different meaning in different jurisdictions. In many technical documents, use of this term is avoided, and the term 'multisource pharmaceutical product' is used instead. In this document, where the term generic medicine is used, it means a pharmaceutical product usually intended to be interchangeable with the innovator product, which is usually manufactured without a license from the innovator company and marketed after expiry of patent or other exclusivity rights where these have previously existed. Generic products may be marketed either under the non-proprietary approved name or under a new brand (proprietary) name. They may sometimes be marketed in dosage forms and/or strengths different from those of the innovator products.

Generic pharmaceutical manufacturers Manufacturers who produce generic medicines

GMP Good Manufacturing Practice

HAART Highly Active Antiretroviral Therapy

HDI Human Development Index

HIV Human Immunodeficiency Virus – a slow-acting retrovirus of the lentivirus family, believed to be the sole or primary cause of AIDS. HIV is transmitted sexually, through blood or vertically (from mother to child). There are 2 known types: HIV-1 and HIV-2.

HIV Test kit There are 3 main types of test for detecting the presence of HIV antibodies: simple/rapid tests, ELISA tests, and confirmatory tests.

¹ AIDS Education Global Information System

² International Chamber of Commerce

³ World Health Organization. *Quality Assurance of Pharmaceuticals. A compendium of guidelines and related materials*. Vol 1, 1997.

International Price Indicator Guide 2002 A joint publication by the World Health Organization and Management Sciences for Health (MSH). Provides a spectrum of prices from non-profit drug suppliers, procurement agencies, and ministries of health, based on their current catalogs or price lists.

Manufacturing license Granted by national licensing authorities and gives authorization to manufacture a specific product in a specified manufacturing plant.

MSF Médecins Sans Frontières – setting up medical humanitarian aid missions around the world since 1971.

MSH Management Sciences for Health – private, non-profit educational and scientific organization working to close the gap between knowledge and action in public health.

MTCT Mother-to-child transmission (of HIV)

Opportunistic infections¹ (OI) An illness caused by a micro-organism that usually does not cause disease in persons with healthy immune systems, but which may cause serious illness when the immune system is suppressed. Common OI in HIV positive people include *Pneumocystis carinii* pneumonia (PCP), *Mycobacterium avium* complex (MAC) and cytomegalovirus (CMV) infection.

Palliative care⁴ Pain and symptom management, and psycho-social support for persons living with a terminal illness, as well as for their families and caregivers.

Pandemic¹ A widespread disease outbreak affecting the population of an extensive area of the world. See also epidemic.

Patents⁵ A title granted by the public authorities conferring a temporary monopoly for the exploitation of an invention upon the person who reveals it, furnishes a sufficiently clear and full description of it, and claims this monopoly.

PLWA People Living With HIV/AIDS

Protease inhibitor (PI) Type of antiretroviral medicine

Proprietary medicines Medicines that are under patent restrictions belonging to a company, institution, or government.

Research based pharmaceutical manufacturers Manufacturers that produce mainly innovative medicines

Reverse transcriptase inhibitor Type of ARV medicine. Can be divided into two classes: Nucleoside Reverse Transcriptase Inhibitor (NRTI) and Non Nucleoside Reverse Transcriptase Inhibitor (NNRTI)

Simple/rapid test Can generally be carried out in 15 minutes and results are read with the naked eye. They are easy to use and require limited training and little or

no equipment, making them particularly suitable for use in Voluntary Counselling and Testing (VCT) centres.

The World Bank Group Established in July 1, 1944 it is one of the world's largest sources of development assistance. In Fiscal Year 2002, the institution provided more than US\$19.5 billion in loans to its client countries.

TRIPS⁶ Agreement on Trade Related Aspects of Intellectual Property Rights

UNAIDS The Joint United Nations Programme on HIV/AIDS (UNAIDS) – by the mid-1990s, it became clear that the epidemic's devastating impact on all aspects of human development, were creating an emergency that would require a greatly expanded United Nations effort. UNAIDS created in 1995 was tasked to coordinate this effort.

UNFPA United Nations Population Fund, began operations in 1969. It is the largest international source of population assistance. About a quarter of all population assistance from donor nations to developing countries is channelled through UNFPA.

UNICEF United Nations Children's Fund – Created by the United Nations General Assembly in 1946 to help children after World War II in Europe. Headquartered in New York, UNICEF carries out its work through eight regional offices and 126 country offices covering more than 160 countries, territories and areas.

WHO World Health Organization – Founded in 1948, the World Health Organization leads the world alliance for Health for All. WHO promotes technical cooperation for health among nations, carries out programmes to control and eradicate disease and strives to improve the quality of human life.

WIPO World Intellectual Property Organization – Founded in 1970, WIPO administers 23 international treaties dealing with different aspects of intellectual property protection.

WTO World Trade Organization – succeeded the General Agreement on Tariffs and Trade (GATT), first signed in 1947 by 23 countries and aimed at protecting and regulating international trade.

1. Introduction

1.1 Background

Improving access to medicines for people living with HIV/AIDS presents a challenge for all countries, and an even greater challenge for the developing nations. By the end of 2002, UNAIDS estimated that the total number of people living with HIV/AIDS stood at 42 million, including 5 million new infections. In the same year, an estimated 3.1 million people died of the disease. Over 95% of the people infected live in developing countries.

The national ownership, initiative, and responsibility taken by National AIDS programme managers, health directors and Health Ministers in these countries is commendable, but the issue of inadequate funding still remains.

To reduce the disparity between needs and funding, successful proposals from low income countries are receiving much needed grants from the Global Fund to Fight AIDS, TB, and Malaria as well as other International Development Assistance, for strategies to prevent new infections, including prevention of mother to child transmission, and treatment and care of infected people. With this new funding, the number of people being treated with antiretrovirals is expected to increase six-fold. This scale-up will require the careful identification, selection, and procurement of medicines.

The high price of many of the HIV-related medicines offered by common suppliers—especially antiretroviral medicines—is one of the main barriers to their availability in developing countries.⁷ These medicine prices may be governed by the following factors:

- Patents⁸
- Limited volume
- Limited price competition
- High import duties, tariffs, and local taxes
- High mark-ups for wholesaling, distribution, and dispensing
- Individual country pricing strategies—for example, price fixing by the government, policies of price freedom for new products or even agreements with industry on profit control.

Even where affordable alternatives exist, many decision-makers do not have the information they need to identify those manufacturers that can supply these medicines. They require easier access to comparative prices.

1.2 Aim

This report sets out to provide market information that can be used to help procurement agencies make informed decisions on the source of medicines and serve as the basis for negotiating affordable prices. The aim is to help increase access to medicines for people living with HIV/AIDS in developing countries.

The data provided by the manufacturers serves to highlight the multiplicity of suppliers and the variation in price of some essential HIV/AIDS-related medicines on the international market. Without this information, there is a risk that low-income countries may be paying more than needed to obtain essential medicines. Price variations are highlighted through the tables and graphs included.

Provision of price information addresses only one barrier to access to medicines in countries with limited resources and, it is appreciated that many other factors will affect the availability of medicines. Some of the other issues that must be considered in relation to the purchase of medicines for HIV/AIDS and related conditions are health infrastructure, human resources, and supply and distribution systems.⁹

⁷ UN agencies and partners are working together to help expand access to the full range of HIV-related medicines, within the context of local health care systems and national HIV/AIDS plans and priorities. A four-part strategy has been adopted to guide and coordinate action on access to HIV-related medicines: (1) rational selection and use of HIV-related medicines (2) affordable prices (3) sustainable financing and (4) reliable health supply systems.

⁸ For further information on Patents and the TRIPS agreement, refer to Annex 4, Further Reading: Intellectual Property Rights and pharmaceuticals.

⁹ Management Sciences for Health and the World Health Organization second edition of *Managing Drug Supply* provides a complete overview as well as step-by-step approaches on how to manage pharmaceutical systems effectively.

1.3 Generating the Report

This report is the fourth in a series of annual reports of sources and prices surveys commenced in 1999. These surveys will be continued and the report will be regularly updated and made available when appropriate.

A survey, carried out from Dec 2002 through to Feb 2003, of 388 manufacturers in 50 different countries was the basis of this report. The number of manufacturers reached has greatly increased since the first survey in 1999 as more resources are made available via industry websites and cooperation with other international organizations; allowing this publication to include **61 manufacturers**. Manufacturers that participated in previous surveys, those held in various databases, and those belonging to National Pharmaceutical Associations were contacted and asked to fill in a comprehensive questionnaire. The response to the questionnaire was accompanied by a National GMP certificate and associated documents relating to the company and the products.

The UNAIDS Secretariat, UNICEF, MSF, and WHO have worked jointly to conduct the survey, and put together the responses into an easy to use, comprehensive publication, whilst respecting the manufacturers' requests for confidentiality with respect to their individual pricing information.

It must be pointed out however that the companies included in this report have been screened only through the completeness of the documents they have provided. Inclusion in the report does not necessarily constitute prequalification or approval of any sort by UNICEF, WHO, UNAIDS or MSF. Only those products identified in Annex 1A in bold and with an asterisk (*) have (at the time of publication of this document) been approved through the ongoing **Pilot Procurement Quality and Sourcing Project** (see section 3.)

1.4 Selection of medicines

The report includes antiretroviral medicines, medicines used to treat a range of opportunistic infections, medicines for use in palliative care, medicines for the treatment of HIV/AIDS-related cancers and medicines for the management of opioid dependence. It also provides information on a range of test kits available for diagnosis of HIV.

The medicines included in the report were selected based on recommendations from available WHO treatment guidelines. The list is not intended to be exhaustive but to broadly cover the most commonly used medicines or medicine categories, in order to ensure that combined with their own resources, purchasing agencies can have at their disposal all medicines required for the comprehensive treatment of HIV/AIDS.

Alternative medicines often are provided as they may be helpful due to:

- Greater cost offset by greater safety, e.g. fluconazole instead of ketoconazole.
- Fewer unwanted adverse effects, e.g. alternatives to amitriptyline

For this survey, paediatric forms have been included wherever possible.

Antiretroviral therapy

Since October 2000, the report has included information on the availability and price range of antiretroviral medicines for use in Highly Active Antiretroviral Therapy (HAART). More specific information on treatment schedules should be obtained from the WHO department of HIV/AIDS at the following webpage http://www.who.int/HIV_AIDS.

Antituberculosis medicines

This report does not include data on sources and prices of medicines for the treatment of tuberculosis as this information is available on the website of the International Price Indicator Guide 2002¹⁰ or of the Global Drug Facility at <http://www.stoptb.org/GDF/drugsupply/drugs.available.html>.

¹⁰ The International Price Indicator Guide 2002 is a joint publication of MSH and WHO. For more information refer to Annex 4, Websites: Drug Prices.

2. Pricing

2.1 Context

The prices listed generally apply in the context of bulk procurement i.e. the working unit is one batch. Although batch sizes vary greatly among formulations and manufacturers, the following sizes are typical: capsules and tablets in batches of 100,000 to 500,000 (these are not minimum purchases, batches of over 1 million are not uncommon); vials and bottles in batches of 5,000 to 20,000.

Prices are ex-works (EXW) or free-on-board (FOB). They do not include the added cost of items such as freight, insurance, import duties or taxes. For this reason the prices quoted in this report cannot be compared with consumer prices. Many countries continue to impose considerable import duties and taxes on the price of essential medicines.¹¹ In addition, wholesale and retail mark-ups vary from one country to the other. As a result, the ex-works price is often less than half of the end-price to the consumer.

Price information and exchange rates are subject to variation, and relate to the date at which the offer was made.

2.2 Offers of donation and price reductions

Public pressure, advocacy, competition from generic manufacturers and initiatives from pharmaceutical companies have led to reduced prices of some drugs for developing countries. There is no systematic approach to the differential pricing. Each company determines its own eligibility criteria for countries, sectors and institutions that may benefit from its reduced price. Some companies offer donations of medicines for specific indications such as to prevent mother-to-child transmission of HIV, or to treat certain opportunistic infections affecting PLWAs.

The prices that are quoted in Section 4 of this publication do not necessarily reflect all agreements that may have been negotiated with individual countries. Information on price offers for antiretroviral medicines publicly announced by pharmaceutical manufacturers, including information on countries eligible for the offers and other conditions, can be found in the MSF report "Untangling the web of price reductions: a pricing guide for the purchase of ARVs

for developing countries" included in this publication as Annex VI.

2.3 Additional methods of cost reduction

In addition to generic competition and advocacy for the reduced pricing of HIV medicines in line with the purchasing power of countries, important parallel avenues to be pursued by governments include, for example, the active use of compulsory licensing, government use of patents and parallel importation. As agreed by the Member States of the World Trade Organization in 2001, least developed countries (LDCs) are not obliged to enforce pharmaceutical patents until at least 2016.¹² LDCs should make use or avail themselves of this provision to purchase lowest cost medicines on the world market. The Global Fund "encourages recipients to comply with national laws and applicable international obligations in the field of intellectual property including the flexibilities provided in the TRIPS agreement and referred to in the Doha Declaration in a manner that achieves the lowest possible price for products of assured quality."¹³ Other measures may include reducing or eliminating import duties and taxes, and increasing demand through pooled procurement.

2.4 Information accompanying each medicine

The prices indicated in this report are based on the price data of 1st quarter 2003, unless indicated otherwise.

The following information is provided for each medicine:

- **The number of manufacturers that gave an indicative price**

¹¹ See *Policy and programming options for reducing the procurement costs of essential medicines in developing countries*, Levinson, L, Boston University School of Public Health, 2003

¹² Doha Declaration on the TRIPS agreement and Public Health, paragraphs 6 & 7

¹³ *The Global Fund to Fight AIDS, Tuberculosis and Malaria, Report of the Third Board Meeting, GF/B4/2*, page 25, para 10 (a).

- The indicative price

Unit

The price quoted relates to the unit described, for example, if the unit is “tab” the price quoted is for a single tablet.

Maximum price

The maximum price listed represents the highest price among products, with no differentiation among original or generic products.

Minimum price

The minimum price listed represents the lowest price among products, with no differentiation among original or generic products.

Median price

The median price is the middle price, or where there is an even number of prices listed, it is the mean of the two middle numbers. This means that half the prices quoted are above this median price, and the other half are below it.

25th percentile

The value point representing the first quartile of quoted prices in ascending order. It is used to give some indication of the dispersion of prices for a given product.

No. < than 25th percentile

This is used to indicate how many manufacturers can produce the medicine below the 25th percentile price range.

- The Brazilian list price

The Brazilian list price included in this report represents the minimum price payable by Brazilian health institutions for the product and is taken from the Brazilian databank of health purchases. Where the entry reads “none”, this indicates no purchase has been made for that product, therefore no minimum price payable is available.

The Spanish list price

This price is ex-works and has been calculated by applying the new margins (as stated in the Royal Decree 286/2001) to the consumer price as published by Consejo General de Colegios Oficiales de Farmacéuticos in Spain (www.cof.es). It should be noted that Spanish list prices are generally considered the lowest in Europe. In most cases, the indicative prices listed in the report are a fraction of the comparative prices in the Spanish list.

3. Access to quality HIV/AIDS medicines and diagnostics

3.1 Pilot Procurement Quality and Sourcing Project

The Pilot Procurement, Quality and Sourcing Project was started by WHO in collaboration with other United Nations Organizations (UNAIDS Secretariat, UNICEF, and UNFPA, supported by the World Bank) in March 2001, as part of a UN-wide strategy to improve access to HIV-related treatment.

This pilot project evaluates pharmaceutical products according to WHO recommended standards of quality and compliance with Good Manufacturing Practices. It is the beginning of an ongoing process that will expand as participation of suppliers increases. A list of suppliers whose HIV-related medicines have been found acceptable, in principle, for procurement by UN agencies is now available on the web sites of collaborating UN agencies.

As of March 2003, 160 product dossiers for various products and dosage forms from 21 manufacturers were received and 74 of these products, from 11 manufacturers, have been fully reviewed and listed as pre-qualified products. The remaining products are currently under review. The products evaluated include antiretroviral medicines, and medicines for the treatment of opportunistic infections and cancers. A list of products evaluated under this pilot project is regularly updated through the websites of collaborating UN agencies. Interested readers are advised to consult these sites for the latest versions, or to access the list via the WHO website: (<http://www.who.int/medicines/organization/qsm/activities/pilotproc/suppliers.doc>)

The survey on Sources and Prices of Selected Medicines and Diagnostics for People Living with HIV/AIDS is a pricing service, not a prequalification service. Every effort has been made to ensure the accuracy of the price information presented here and screening of the products included in this survey has been carried out as indicated on page 2. This screening, however, in no way constitutes an in depth review of product quality. Products that have been pre-qualified by the **Pilot Procurement, Quality and Sourcing Project** are marked in Annex Ia of this document in bold and with an asterisk (*). Other products listed in this document should, in relation to purchase, be subject to pre-qualification review as indicated in the WHO

General Procedure for Prequalification of Suppliers of Pharmaceutical Products.

(Please refer to <http://www.who.int/medicines> for more information.)

3.2 Product registration

Annex 1A provides information on countries in which the majority of products listed are currently registered. This information is given as supplied by manufacturing companies, and is subject to change.

3.3 Diagnostics

In 1989, WHO established a HIV test kit bulk-procurement scheme, which now is operated in collaboration with other United Nations organizations (UNAIDS Secretariat, UNICEF, UNFPA, and World Bank). The aim is to provide national AIDS programmes, blood transfusion services, large hospitals, non-governmental organizations, reference laboratories, UN agencies, donor-supported AIDS projects, and regulatory authorities in developing countries with high quality tests at the lowest possible cost.

Since 1988, WHO has provided objective assessments of commercially available test kits. This ongoing evaluation programme is coordinated by the Department of Blood Safety and Clinical Technology. All HIV tests available through the scheme have been evaluated by the WHO evaluation programme and meet specific, rigorous criteria (see Annex 2 for further details). Bulk purchase prices for all assays in the scheme are directly negotiated with the manufacturers, a process that enables the scheme to offer a per test cost approximately half that of tests purchased on the open market, which has resulted in substantial cost savings.

The test kits on the list are reviewed annually and cover the three broad categories, including simple/rapid test, ELISA tests and supplemental tests. Annex 3A provides an overview of the assays included in the HIV test kit bulk procurement scheme 2003.

Over recent years there has been an increase in the availability and demand for simple/rapid tests. These are easy-

to-use tests that require little or no equipment and limited training to perform and can provide accurate same-day results. This makes them particularly suitable for use in voluntary counselling and testing (VCT) centres and in antenatal clinics for prevention of mother to child transmission of HIV. When initial tests are reactive for HIV, confirmation of the test results is needed to rule out any false positive results. Information on recommended WHO testing strategies is available in *Weekly Epidemiological Record*, 1997, 72, 81–88.

Increased access to antiretroviral (ARV) medicines has also highlighted the need for appropriate and cost effective diagnostic support. Diagnostic support is essential

to monitor the progression of the disease, the effectiveness of the treatment and the development of resistance. The existing systems for assessment and procurement of HIV test kits is being expanded to include technologies used to monitor ARV therapy (CD4 counts and Viral Load) and drug resistance. An overview of available types of CD4 T-cell enumeration technologies are given in Annex 3A, whilst information on HIV Viral Load technologies and HIV resistance tests is given in Annex 3B. Please note that this information is regularly updated and available on the WHO website at www.WHO.int/bct (follow the links to Key Initiatives, HIV Diagnostics, HIV Test Kit Bulk Procurement Scheme).

5. Variation in price between surveys

Figure 1. Variation in the maximum price quoted for ciprofloxacin and fluconazole between the 1st (2000) 2nd (2001) 3rd (2002) and 4th (2003) surveys

There is a considerable decrease in the price of fluconazole between surveys, as shown in Figure 1 above, whereas ciprofloxacin has only shown a very slight decrease in price.

Table 6. Variation in the price of ciprofloxacin and fluconazole

Notes

¹ Please note that this price does not include freight nor other charges.² These assays can discriminate between HIV-1 and HIV-2.

Equipment requirements: A: ELISA reader; B: ELISA washer; C: Consumables; D: Pipette; E: Power supply; F: For large volume testing more than 40 samples daily; G: For small volume testing 1 to 40 samples daily.

ANNEX 3A

Summary of main characteristics of methods for CD4/CD8 lymphocyte determination

	Flow cytometry	FACSCount™	Coultier manual CD4+ count kit	Zymmune	Capcella	Dynabeads®	Immunoalkaline Phosphatase
Manufacturer	Becton Dickinson Coulter Corp. Ortho Diagnostic Syst.	Becton Dickinson	Coulter Corp.	Zynaxis Inc.	Sanofi Diagnostics Pasteur	Dynal A/S	Reagents available commercially
Instrument	Flow cytometer and computer assisted analysis. Preparation can be automated. May need use of cell counter.	Automated special instrument	Automated or light microscope and hematocytometer.	Microtiter EIA	Microtiter EIA	Magnet and counting equipment* alt. light or fluorescence microscope	Light microscope
Detection system	Fluorescence labelled MAB against cell surface molecules.	Fluorescence labelled anti-CD3, CD4 and CD8 MAB	anti-CD4 MAB conjugated to beads	Anti-CD4 and CD8 MAB	Anti-CD4 and CD8 MAB	Anti-CD4 and CD8 conjugated to magnetic beads.	Staining of blood smears with anti-CD3, CD4 and CD8 MAB
Specimen	Whole blood with RBC lysis	Whole blood	Whole blood	PBMC	Whole blood	Whole blood	Blood smear
Results	Double, triple or quadruple stainings of any cell surface marker where MAB are available.	CD3, CD4 and CD8 counts	CD4 and CD8 counts	CD4 and CD8 counts pmol CD4/L and CD8/L	CD4 and CD8 counts	CD3, CD4 and CD8 counts (or any MAB of interest)	CD3, CD4 and CD8 counts
Correlation with flow cytometry (corr coeff)	NA	0.93–0.98 (several international studies)	0.74–0.91 (several international studies)	0.92–0.94 (two studies in USA)	NA	0.94 (one study)	0.96 (one study)
Cost (instruments, USD)	40–80 000	25 000	2000	15 000 (standard equipment for EIA)	15 000 (standard equipment for EIA)	2000–10 000	2000

	Flow cytometry	FACSCount™	Coulter manual CD4+ count kit	Zymmune	Cappellia	Dynabeads®	Immunoalkaline Phosphatase
Cost/test (reagents only; USD, approx.)	10–15	20	8		28	5	3
Advantages	Powerful and flexible, allows for double, triple or quadruple stainings. Can be used for examination of difficult samples where alternative techniques often are insufficient.	Few steps, less human error. Low biohazard risk. Quick results. Gives CD3, CD4 and CD8 counts.	Simple and rapid	Simple. Can process many samples at a time. Gives CD4 and CD8 counts.	Gives CD4 and CD8 counts.	Gives CD4 and CD8 counts. Simple and rapid. Flexible, small sample volume. Robust.	Low cost. Long specimen shelf life. Small sample volume.
Disadvantages	Expensive equipment and reagents. Complex, requires highly trained personnel.	Expensive equipment and reagents. Work station allows only 8 samples at a time.	Short shelf life. Gives only CD4 counts.	Many pipetting steps.	PBMC isolation by density centrifugation. Does not give results as a cell number, i.e. difficult to compare results with e.g. flow cytometry. Expensive.	Few samples processed at a time. Subjectivity in visual counting. Short specimen shelf life. Not yet available as a kit	Fairly complicated staining process. Laborious manual counting. Not available as a kit.

Precision (coeff of variation) similar for all assays as given by the manufacturers: <5–10%.

* Automated cell counter or hematocytometer

PBMC: peripheral blood mononuclear cells; MAB: monoclonal antibodies; EIA: enzyme immunoassay; RBC: red blood cells; NA: not applicable

ANNEX 3B

Summary of main characteristics of Viral Load Technologies

(nucleic acid based)

1. GENERAL INFORMATION

Your name

Occupation

Company name/Organization name

Address

Telephone

Fax

Email (required)

Internet address

2. FEEDBACK

What did you think of the publication in general?

- Excellent, very useful Good, quite useful Satisfactory, reasonably useful
 Poor, not useful—please indicate why: _____

What did you think of the medicines included in the publication?

- Good selection of medicines
 More medicines required, for example: _____
 Fewer medicines required, remove: _____

What did you think of the pricing information?

- Good, enough information on the prices of drugs of interest
 Poor, not enough information

Have you contacted any of the manufacturers listed?

- Yes No

Other comments:

3. ENQUIRY

- I would like to participate in the next Survey (Manufacturing companies only)
 I would like to receive more copies of the Publication

Other enquiry:

General background and objectives

Lack of clear information on pharmaceutical prices on the international market is a significant barrier to improving access to essential medicines in developing countries. The situation is particularly complex in the case of antiretrovirals (ARVs).

The data in this guide on ARV prices offered by originator companies and some generic companies in low- and middle-income countries are meant to provide potential buyers with clear verified data. This information is intended for use by government and non-profit procurement agencies, as well as other bulk purchasers of ARVs, including health facilities and non governmental organisations (NGOs).

pharmaceutical manufacturers and products according to WHO recommended standards of quality and compliance with Good Manufacturing Practices. It is part of an ongoing process that will expand as the participation of suppliers increases. An updated list of products is regularly posted on the websites of WHO and other UN-collaborating agencies; products on this list are commonly referred to as "WHO pre-qualified." This list of "pre-qualified" drugs is not exhaustive.

Pricing information on other essential drugs and diagnostics used for HIV/AIDS can be found in the 4th edition of the report "Sources and Prices of Selected Drugs and Diagnostics for People Living with HIV/AIDS" May 2003².

This document includes both adult and paediatric formulations, and is meant to be used in tandem with the report of "Pilot Procurement, Quality and Sourcing Project: Access to HIV/AIDS Drugs and Diagnostics of Acceptable Quality", a project initiated by WHO and developed in collaboration with other United Nations Organisations (UNAIDS, UNICEF, UNFPA). This project evaluates

This fourth edition provides:

- **updated information** on prices for eligible countries, including both price per unit and price per patient per year for adult and paediatric formulations
- **updated information and clarifications** on the conditions and restrictions applying to these offers

<p>such as memoranda of understanding or special agreement</p> <p>iv. delivery of goods in relation to payment (FOB, CIF etc.)⁵</p>	<p>Information is presented in a table format to facilitate comparison. However, comparison is difficult because of the lack of standardisation among different companies on eligibility, terms and conditions, and pricing. For products for which complete information was available, the annual cost of therapy was calculated according to the dosing schedules reported in WHO "Scaling-up Antiretroviral Therapy in Resource Limited Settings: Guidelines for a Public Health Approach"⁶, 2002, or the Centres for Disease Control and Prevention (CDC), "Guidelines for the Use of Antiretroviral Agents in HIV-Infected Adults and Adolescents", by the Panel on Clinical Practices for the Treatment of HIV, 2002⁷.</p>
<p>contacted and asked to verify their offers. The list of generic producers included in this report is by no means exhaustive⁴. All generic drugs included in this pricing guide have made price offers for developing countries and have at least been cleared for marketing in their countries of origin.</p> <p>Manufacturers were asked to provide the following information:</p> <ul style="list-style-type: none">• drug, dosage and pharmaceutical form <p>• price per unit (or daily dose) of different price offers</p> <ul style="list-style-type: none">• restrictions that apply to the offers, including:<ol style="list-style-type: none">i. country eligibilityii. potential beneficiaries of the offeriii. additional comments on conditions or procedures, such as quantity restrictions, how to access discounts, bureaucratic procedures	<p>This is the fourth edition of "Accessing Antiretrovirals: Untangling the Web of Price Reductions for Developing Countries", the first edition was published in October 2001³.</p> <h2>Methodology</h2> <p>In order to obtain accurate information on discounted price offers by both originator and generic companies, companies were</p>

for approving use of a given drug from a given manufacturer. Products that were “WHO pre-qualified” at the time of writing are indicated with an asterisk (*).

Limitations of the current system

It is important to note that these prices may not correspond to end-user prices (prices to patients), which may be further influenced by other factors such as national distribution and handling charges, mark-up rates, and national and/or import and sales taxes. Information concerning the patent status of ARVs was not included in the present analysis, and will differ between countries. Some information about patent status of ARVs in some countries can be found in “Patent Situation of HIV/AIDS related drugs in 80 countries”, WHO/UNAIDS, 2000⁸.

Practical information on patents can also be found in the new MSF report “Drug patents under the spotlight: sharing practical knowledge about pharmaceutical patents”, May 2003⁹.

Inclusion in the report does not constitute pre-qualification or approval by MSF. National regulatory authorities are ultimately responsible

benefit from this offer) but not in Central America where prices are negotiated on a case-by-case basis through the Accelerated Access Initiative.

Even when a given country is eligible, all institutions within the country may not be eligible for reduced prices. Again, eligibility is currently at the companies' discretion. It does not mean that the drugs are registered and a distribution system exists in these countries.

In actual practice, MSF has observed that the most powerful downward pressure on prices has been a system of equity pricing. Equity pricing is composed of a series of simultaneous strategies: a) stimulating generic competition; b) differential pricing which addresses all developing countries, according to clearly defined policies, or voluntary licensing of proprietary products; and c) readiness on the part of national governments to override patents by issuing compulsory licenses or making government use of a patent when affordable prices are not offered for patented products. Since the adoption of the *Doha declaration on TRIPS and Public Health* least

developed countries (LDC's) are not obligated to patent drugs until 2016¹¹.

Although generic competition is a critical factor in reducing prices (see Graph 1, where the prices trend of a sample ARV triple therapy combination is shown over the period May 2000-April 2003), it cannot be a stand-alone strategy as newer drugs may not be available in generic form immediately. There is an urgent need to develop a more systematic, transparent approach to differential pricing of originator products in addition to stimulating generic competition.

The challenge of paediatric formulations

Children living with HIV/AIDS are one of the most neglected populations: paediatric formulations are lacking and/or formulations do not meet children's and caregivers' needs (unpleasant tasting syrup, tablets too big to swallow, need to refrigerate some products, unbreakable tablets, lack of fixed dose combinations (FDCs), and non-adapted dosages. For example there are currently no fixed dose combinations for paediatric use.

Research and development for HIV/AIDS

Paediatric formulations is not the only area where there is a need for R&D. For both adults and children, new drugs and diagnostic tools, as well as vaccines are needed for HIV/AIDS.

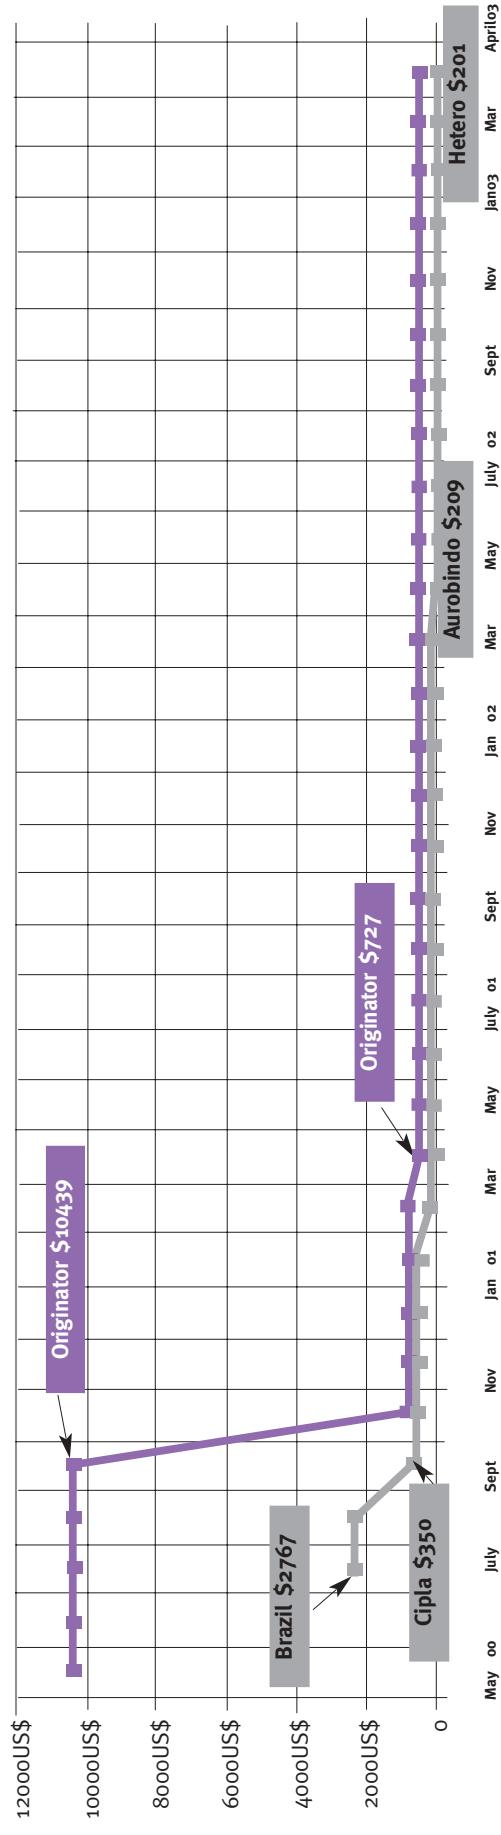

Pharmaceutical investment in research and development largely corresponds to developed country patient needs, where the epidemic has more or less stabilized. We need to ensure that there is a strong focus on the needs of patients in developing and least developed countries and that the R&D momentum is not lost.

The Effects of Generic Competition

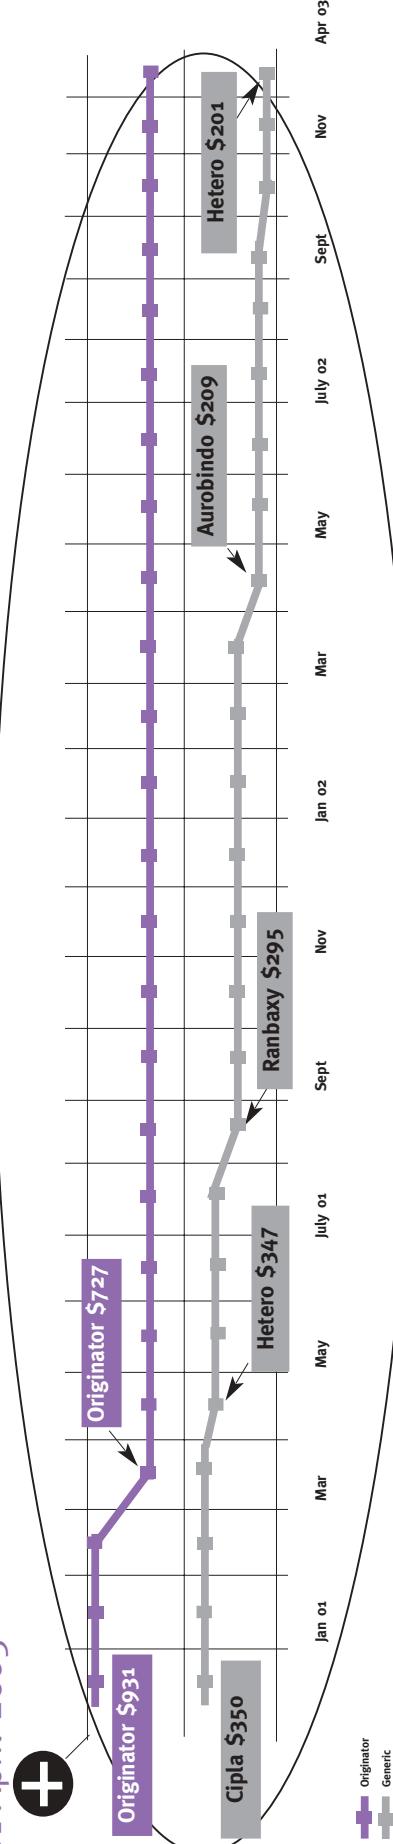

Sample of ARV triple-combination: stavudine (d4T) + lamivudine (3TC) + nevirapine (NVP). Lowest world prices per patient per year.

Generic competition has shown to be the most effective means of lowering drug prices. During the last three years, originator companies have often responded to generic competition.

May 2000-April 2003

January 2001-April 2003

Guide to reading and using tables

Guide to reading and using tables

Quality: This document strictly relates to prices: products from specific manufacturers have not necessarily been assessed for quality standards. Therefore, procurement agencies should follow their own procedure in this respect.

Prices: table 1 shows the best price offers of some generic manufacturers and originator producers for each antiretroviral drug, including fixed-dose combinations. Figures within brackets indicate price in US\$ per unit (capsules, tablets etc.). Prices per patient per year have been calculated according to daily doses given either in WHO guidelines or in CDC guidelines (for those products not recommended in WHO guidelines). Prices can be used as a reference with suppliers.

Restrictions: tables 2a) and 2b) show restrictions imposed by generic and originator companies and provide indications about the availability of offers in individual countries. There is no uniform differential pricing system and each company sets geographical limits to their programmes.

Access: since ARVs are not always registered and/or available in ‘selected countries’, many offers from pharmaceutical companies may remain ‘theoretical’ until the companies are challenged to follow through on their offers, by registering the products and creating proper distribution channels at national or regional level.

Please refer to Annexes 1, 2 and 4 for updated country classification by UNCTAD (Least Developed Countries), UNDP (Human Development Index) and World Bank (Low income Countries). Annex 3 lists sub-Saharan countries.

This document is also available in French and Spanish on
www.accessmed-msf.org

Glossary¹²

3TC lamivudine (Epivir®); nucleoside analogue reverse transcriptase Inhibitor	<p>CIF¹³ ‘Cost Insurance and Freight’ means that the seller delivers when the goods pass the ship’s rail in the port of shipment. The seller must pay the costs and freight necessary to bring the goods to the named port of destination BUT the risk of loss or damage to the goods, as well as any additional costs due to events occurring after the time of delivery, are transferred from the seller to the buyer.</p> <p>CIP¹³ ‘Carriage and Insurance paid to...’ means that the seller delivers the goods to the carrier nominated by him but the seller must in addition pay the cost of carriage necessary to bring the goods to the named destination. This means that the buyer bears all the risks and any additional costs occurring after the goods have been so delivered. However, in CIP the seller also has to procure insurance against the buyer’s risk of loss of or damage to the goods during the carriage. Consequently, the seller contracts for insurance and pays the insurance premium.</p> <p>AII United Nations Accelerating Access Initiative; Accelerated Access emerged out of the partnership initiated in May 2000 between the UN (UNFPA, UNICEF, WHO, the World Bank and UNAIDS Secretariat) and five pharmaceutical companies (Boehringer-Ingelheim GmbH, Bristol-Myers Squibb, GlaxoSmithKline, Merck & Co., Inc., and F. Hoffmann-La Roche Ltd (Roche); Abbott Laboratories Ltd. joined the initiative later) to increase access to HIV/AIDS care, treatment and support. AAI plays a role in facilitating price negotiations between developing country governments and ‘originator’ drug companies that are participating in the AAI.</p> <p>ABC abacavir (Ziagen®); nucleoside analogue reverse transcriptase inhibitor</p> <p>AIDS Acquired Immune Deficiency Syndrome</p> <p>ARVs Antiretroviral drugs</p> <p>BMS Bristol-Myers Squibb</p> <p>CDC Centres for Disease Control and Prevention</p>	<p>DDU¹³ ‘Delivered duty unpaid’ means that the seller delivers the goods to the buyer, not cleared for import, and not unloaded from any arriving means of transport at the named place of destination. The seller has to bear the costs and risks involved in bringing the goods thereto, other than, where applicable, any ‘duty’ (which term includes the responsibility for the risks of the carrying out of the customs formalities, and the payment of formalities, customs duties, taxes and other charges) for import in the country of destination. Such ‘duty’ has to be borne by the buyer as well as any costs and risks caused by his failure to clear the goods for the import time.</p> <p>EML Essential Medicines List. First published by WHO in 1977, it is meant to identify a list of medicines, which provide safe and effective treatment for the infectious and chronic diseases, which affect the vast majority of the world’s population. The 12th Updated List was published in April 2002 and includes 12 antiretrovirals.</p> <p>EFV efavirenz (Stocrin®); non-nucleoside analogue reverse transcriptase inhibitor</p> <p>d4T stavudine (Zerit®); nucleoside analogue reverse transcriptase inhibitor</p>
--	--	---

EXW ^[5] ‘Ex-works’ means that the seller delivers when he places the goods at the disposal of the buyer at the seller’s premises or another named place (i.e. works, factory, warehouse etc.) not cleared for export and not loaded on any collecting vehicle.	IDV indinavir (Crixivan®); protease inhibitor LDCs Least Developed Countries, according to United Nations classification MSD Merck Sharp & Dome (Merck & Co., Inc.)	SQV hgc saquinavir hard gel capsules (Invirase®); protease inhibitor SQV sg saquinavir soft gel capsules (Fortovase®); protease inhibitor TDF tenofovir (Viread®); nucleotide reverse transcriptase inhibitor
FOB ^[6] ‘Free on board’ means that the seller delivers when the goods pass the ship’s rail at the named port of shipment. This means that the buyer has to bear all costs and risks of loss or damage to the goods from that point. The FOB term requires the seller to clear the goods for export.	MSF Médecins Sans Frontières NGO Non Governmental Organization NFV nelfinavir (Viracept®); protease inhibitor NNRTI Non-Nucleoside Reverse Transcriptase Inhibitor	UNAIDS United Nations Joint Co-sponsored Programme on HIV/AIDS, created in 1996, to lead, strengthen and support an expanded response to the HIV/AIDS epidemic. The six original Cosponsors are UNICEF, UNDP, UNFPA, UNESCO, WHO and the World Bank. UNDCP joined in April 1999 UNDP United Nations Development Programme UNFPA United Nations Population Fund UNICEF United Nations Children’s Fund WHO World Health Organization
Generic drug According to WHO, a pharmaceutical product usually intended to be interchangeable with the innovator product, which is usually manufactured without a license from the innovator company. Generic products may be marketed either under a non-proprietary or approved name rather than a proprietary name.	NRTI Nucleoside Analogue Reverse Transcriptase Inhibitor NtRTI Nucleotide Reverse Transcriptase Inhibitor NVP nevirapine (Viramune®); non-nucleoside analogue reverse transcriptase inhibitor	ZDV zidovudine (Retrovir®); nucleoside analogue reverse transcriptase inhibitor
GPO Governmental Pharmaceutical Organization (Thailand) GSK GlaxoSmithKline HIV Human Immunodeficiency Virus	PMTCT Prevention of Mother-To-Child Transmission r ritonavir (Norvir®), low dose ritonavir used as a booster; protease inhibitor
